Chapter 1

1.1 Project problem:

Most English learning apps use childish designs, long lessons, and repetitive activities that require high levels of focus. However, most people today have a short attention span, as a result these apps often make people feel bored and lower their motivation.

Additionally, most of these apps focus on vocabulary, reading and listening where as speaking practice is either weak or difficult to access. Users often need to rely on fixed schedules with human teachers or use isolated speaking features that are not well trained in speaking practices. Because of this most students are good at reading and comprehension but struggle with speaking.

There is a need for a language learning interface that is clear, engaging, and designed for short attention spans, while still supporting real speaking practice through modern interaction methods.

1.2 Project Proposal:

Our app is designed to improve the user's experience with a modern, scrolling interface and interactive speaking features. It helps beginner learners study English in short, focused sessions that fit easily into their daily routines.

The app provides two speaking options: practice with a trained AI language agent for flexible, stress-free interaction, and an option to book live speaking sessions with human teachers when guided practice is needed. The interface aims to be simple and easy to navigate, with clear feedback and visible progress.

The app enhances existing language learning practices and offers a more engaging and effective way for users to learn and practice English by using short-form interactions and conversational technology.

1.3 Analysis:

English language applications are widely known and used among adult learners due to their flexible and accessible options. Popular platforms such as Duolingo demonstrate that digital tools can support learning through organized lessons, monitored progress, and consistent practice. These applications show that users can gain advantages from the tools that fit into their daily routine.

However, many applications lack effective design that appeals to adult learners. Most of them rely on childish graphics and repetitive exercises which reduce user motivation. Lessons tend to require a long period of focus, while modern adult users prefer to learn in quick short sessions.

Speaking practices are also limited in some applications where they only offer basic unchallengeable tasks, while others depend on scheduled human tutors which can be expensive and time constrained.

In this regard, our application provides a trained AI agent for people who are shy to practice in front of human beings and for those who find tutors expensive, or their schedules may conflict with those of the tutors. Such features can lower anxiety and encourage regular speaking. At the same time users can book live sessions with human tutors if they need correction or guidance, combining flexibility with quality.

Application Key features:

- Scrolling based interface for short attention spans.
- Multiple interfaces for children and adults.
- Trained AI agent for low pressure speaking practice.
- Optional live speaking sessions with tutors.

Overall, our application improves how the learning methods are delivered. It also makes sure that it fits the general preference for each age range ensuring more balanced approach to learning English.

Chapter 2

2.1 Users

2.1.1 Primary users

Language learners:

People who are eager to learn and improve their language using a mobile app. Users are likely students or adults who prefer quick, scroll-based lessons instead of long sessions. Some users may have limited English, so they receive help from simple explanations and optional Arabic support.

What they use the system to do:

- Practice conversing with an AI conversational agent.
- Scroll through short lessons and finish them quickly.
- Complete vocabulary , listening, and reading activity.
- Track their progress and complete lessons.
- Book live speaking sessions with human teachers when required.

Characteristics:

- Use mobile phones often.
- Prefer brief and quick learning sessions.
- Want a simple and easy to use interface.
- Learn in small steps instead of long lessons

Persona — (Primary User):

Name: Ahmed.

Age: 20

Background: University student learning English through his phone.

Goals: Improve his English language skills while finding it enjoyable .

Behavior: Learns daily, scrolls through lessons and practices with AI.

Needs: Quick lessons, progress tracking, and an easy to understand app.

2.1.2 Secondary users

Human teachers:

Language teachers who teach learners live speaking sessions through the application.

What they use the system to do:

- Select their availability for speaking sessions.
- Receive and manage learners booking requests.
- Start live speaking sessions with learners.

Characteristics:

- Use the system mostly for scheduling and teaching.
- Need a clean and easy to use scheduling interface.

Persona — (Secondary User):

Name: Fatima.

Age: 30

Background: English teacher who provides online speaking sessions.

Goals: Teach learners speaking through live sessions.

Behavior: Checks bookings and teaches scheduled sessions.

Needs: Easy scheduling and clear session management.

2.3 Tasks:

Lesson task:

- With system: users scroll through lessons and select short learning tasks. Lessons are displayed in a clear, modern interface for quick interaction.
- Without system: users complete long usual lessons and book a session with a tutor which requires focus and a prescheduled timetable.

Speaking practice task:

- With system: users practice their speaking with a trained AI agent that provides instant feedback. They can also book sessions when required with a human teacher through the application.

- Without system: users might practice speaking alone, rely on limited features or book private fixed sessions with tutors.

Maintaining motivation task:

- With system: users stay motivated throughout the short lessons, tasks and feedback which helps in enjoyment and consistent use of application.
- Without system: users depend on streaks and badges. They will lose motivation as soon as they miss a day and the streak is gone.

Progress tracking task:

- With the System: The system displays a dashboard showing progress, which includes completed lessons, improvement of their speaking skills, daily results, and personalized learning suggestions.
- Without the System: Users track their progress using their own notes or memory, incorrectly assess their improvement, and lack guidance for next steps.

Receiving feedback task:

- With the System: learners receive immediate and straightforward feedback to support their learning process. This allows them to identify their mistakes comfortably, without feeling any pressure.
- Without the System: Feedback tends to be more limited, often restricted to a simple correct/incorrect answers in quizzes, delayed responses from teachers or, in some cases, no feedback at all during solo practice sessions.

2.4 Requirements:

2.4.1 Functional requirements:

1. Users will be able to increase their speaking abilities by supporting with an AI chatbot that shows naturally and serves as a helpful tool.
2. Users can order live speaking lessons with human teachers through a direct booking system.
3. Learners will join in interactive activities that keep them focused without creating any stress.
4. The system will divide each lesson into smaller parts to help user is focus.
5. Users will have access to vocabulary, listening, and reading exercises, all displayed in scrolling format similar to the short lessons, with a greater focus on speaking practice.

6. Learners can track their progress through a dashboard that shows improvements in speaking, completed lessons, and daily streaks.
7. The platform will provide learning suggestions based on the user's performance and speaking history.
8. Instructors will be able to access and manage scheduled speaking sessions using an easy to use and active interface.

2.4.2 Non-Functional requirements:

1. The system will feature clear visual, simple icons, and minimal text to make the interface easy to understand.
2. Users will be able to start a speaking session without needing any instructions.
3. The system will support users with limited English skills by using simple language and offering optional Arabic explanations.
4. Lessons and AI speaking sessions will load quickly to keep users focused.
5. The system will help users to stay active with simple and non-distracting features.
6. The system will use readable font sizes and simple visuals to ensure the interface is clear to everyone.
7. The Instructions interface will stay clean and simple to let teachers easily access schedules and student information.

2.5 Interviews and Questionnaires:

2.5.1 Interviews:

First interview — University Student (Razan) by Lama Alzubaidi:

1-In your opinion, are English learning applications designs easy and appropriate, or do they feel childish and distracting?

No not necessarily. However, when it takes the form of a game, you may not benefit from it much, because it relies more on gaming skills than on language ability. This can lead to distraction and lack of focus and understanding on the intended content.

2-Do you find committing to a fixed learning schedule to be an obstacle for you, and why?

Yes, it represents an obstacle for me. As a student, I have a constantly changing daily schedule (exam period, activities, hobbies and other commitments). Therefore, fixed tutoring time does not suit someone with a lifestyle like mine.

3-How does the way content is presented (long lessons vs. short lessons) affect your focus and consistency in learning?

Personally, I prefer short presentation style first, to understand the general content. However, it is necessary to have a longer explanation afterward to satisfy curiosity and make information easier to remember, which leads to continuity in learning.

Second interview — University Student (Reema) by Lama Alzubaidi:

1-In your opinion, are English learning applications designs easy and appropriate, or do they feel childish and distracting?

I do not believe that the design is generally childish. I think that focusing on childlike style aims to make the application suitable for different age groups, and it also helps in forming an initial perception of the application's learning methodology.

2-Do you find committing to a fixed learning schedule to be an obstacle for you, and why?

I do not think that committing to a fixed learning schedule is an obstacle. The issue is often more related to motivation and determination rather than time management.

3-How does the way content is presented (long lessons vs. short lessons) affect your focus and consistency in learning?

I find that short content captures my attention more and makes it easier to absorb the information, because it enhances focus in less time, which helps maintain continuity in learning.

Third interview — University Student (Lara) by Lama Alzubaidi:

1-In your opinion, are English learning applications designs easy and appropriate, or do they feel childish and distracting?

I do find it childish, but it does not cause me any distraction.

2-Do you find committing to a fixed learning schedule to be an obstacle for you, and why?

Yes, I find committing to a fixed time is an obstacle, because it is not practical with my university lifestyle.

3-How does the way content is presented (long lessons vs. short lessons) affect your focus and consistency in learning?

I think that the longer the content is, the harder and more boring it becomes for me to concentrate.

Fourth Interview — High School Student (Jomana) by Deena Aljeraiwi:

1-In your opinion, are English learning applications designs easy and appropriate, or do they feel childish and distracting?

I feel like many of them look childish. The colors and animations make me feel like they're made for younger kids. They don't distract me, but they don't match my age either.

2-Do you find committing to a fixed learning schedule to be an obstacle for you, and why?

Yes, it's definitely an obstacle. My school schedule changes a lot, and I always have homework or exams, so it's hard to stick to a specific time every day.

3-How does the way content is presented (long lessons vs. short lessons) affect your focus and consistency in learning?

Long lessons make me lose focus quickly. I prefer short lessons because I can finish them fast and feel more motivated to continue.

Fifth interview — Beginner English Learner (Lamya) by Deena Aljeraiwi:

1.In your opinion, are English learning applications designs easy and appropriate, or do they feel childish and distracting?

Some apps feel too simple and a bit childish. I wish the design looked more professional while still being easy to use.

2. Do you find committing to a fixed learning schedule to be an obstacle for you, and why?

Yes, it's difficult. My work hours aren't always the same, and I'm usually tired after work, so I need something flexible that I can use whenever I have a few free minutes.

3. How does the way content is presented (long lessons vs. short lessons) affect your focus and consistency in learning?

Long lessons are tiring, especially after work. Short lessons help me stay consistent because they don't take much time and feel easier to complete.

Sixth interview — High School Student (Lamar) by Lama Almutairi:

1. In your opinion, are English learning applications designs easy and appropriate, or do they feel childish and distracting?

I often mistake English learning apps for games, and I don't trust the apps childish designs to be affective.

2. Do you find committing to a fixed learning schedule to be an obstacle for you, and why?

Yes, it's difficult. I prefer to learn based on my current mood; it allows me to focus more.

3. How does the way content is presented (long lessons vs. short lessons) affect your focus and consistency in learning?

Long lessons reduce my motivation to learn; I can study for 5h using short lessons but I struggle to maintain focus during long lessons.

Seventh interview — Middle School Student (Ahad) by Lama Almutairi:

1. In your opinion, are English learning applications designs easy and appropriate, or do they feel childish and distracting?

They seem overly childish, and the bright color schemes are so intense that they give me a headache.

2. Do you find committing to a fixed learning schedule to be an obstacle for you, and why?

No, I prefer having a fixed schedule as it encourages me to remain committed to my learning goals.

3. How does the way content is presented (long lessons vs. short lessons) affect your focus and consistency in learning?

I prefer long lessons because they help me stay immersed in learning mood.

Eighth interview — Mathematics Teacher (Asmaa) by Norah Almurabidh:

1. In your opinion, are English learning applications designs easy and appropriate, or do they feel childish and distracting?

Yes, A lot of applications feel too childish, therefore it makes it hard for me to take learning seriously. I would choose a simple and clean design .

2. Do you find committing to a fixed learning schedule to be an obstacle for you, and why?

Yes, because I don't maintain the same level of focus every time. Especially with my job as a teacher having a fixed schedule, It would be nice to choose my lesson timing.

3. How does the way content is presented (long lessons vs. short lessons) affect your focus and consistency in learning?

I prefer short content because maintaining my focus becomes easier, a lot more enjoyable , and it helps me stay consistent.

Ninth interview — University Student (Sara) by Norah Almurabidh:

1. In your opinion, are English learning applications designs easy and appropriate, or do they feel childish and distracting?

Yes They are childish but I don't find them distracting, I enjoy playful designs.

2. Do you find committing to a fixed learning schedule to be an obstacle for you, and why?

No, I prefer a fixed schedule because it helps me stay disciplined and build a learning habit.

3. How does the way content is presented (long lessons vs. short lessons) affect your focus and consistency in learning?

I prefer long lessons, it explains things clearly and is easier to understand .

Tenth interview — Office Employee (Khalid) by Norah Almurabidh:

1. In your opinion, are English learning applications designs easy and appropriate, or do they feel childish and distracting?

I find their design easy to understand and clear, The color choices might be a little childish for me. I prefer neutral colors when using the learning app.

2. Do you find committing to a fixed learning schedule to be an obstacle for you, and why?

Yes, because of work responsibilities. I prefer learning whenever I have free time.

3. How does the way content is presented (long lessons vs. short lessons) affect your focus and consistency in learning?

Short content is preferred because I can learn enjoyably without it feeling like a task.

Conclusion:

Based on the ten interviews that were held up with different age ranges and backgrounds, common patterns were discovered regarding English language learning applications. Most participants revealed their concern about childish or game-like designs, bear in mind that while the designs may not always be distracting but it can reduce seriousness of learning experience, particularly for older learners. Moreover, many of them shared that committing to a pre-established timetable is challenging due to their unstable routines, resulting to the need for a flexible session time. In terms of content delivery, there was a strong preference for short lessons, as they increase focus and support consistency. However, some of them pointed the importance of having an optional extended explanation to enhance understanding. These findings guide our interface design in becoming more flexible, presenting content in short or extended explanations, and adjusting the visual style to suit diverse user preferences.

2.5.2 Questionnaires:

To ensure the success and usability of our app, we conducted this survey to gather data-driven insights from over 50 participants. This feedback allows us to tailor the app's features and interface to match user preferences, ultimately delivering a more effective and satisfactory learning experience.

الى أي فئة عمرية تنتمي؟

51 ردًا

Age distribution: most responds fall between 18-25 followed by those above 25. This shows that the survey represents that university and young adult age learners use English language learning applications.

كم مرة تستخدم تطبيقات لتعلم اللغة الانجليزية؟

51 ردًا

Frequency of using English learning applications: usage is broadly distributed. Small group of people use them regularly, while a larger share use them rarely or not at all. It shows that even when such applications are available, they are not integrated into the user's daily habits.

هل تشعر أن هذه التطبيقات تساعدك فعليًا على التحدث باللغة الإنجليزية؟

51 ردًا

Helpfulness perceived by using these applications: around 57% believe that it helps to improve their skills while others do not. This affects the current application benefits, meaning that there is room for future design improvement.

ما أكثر شيء يزعجك في تطبيقات تعلم اللغة الحالية؟

(يمكن اختيار أكثر من خيار)

51 ردًا

Unpleasant features: most selected one is long boring sessions followed by limited interactions. This implies that users prefer practical, short and quick engagement tools over long ones.

أيهما تفضل لتعلم المحادثة؟

51 ردًا

Conversation preference: A significant majority 60% prefer a mix of both AI and real human interaction, this indicates that while AI is a valuable tool, some users still value the authenticity of human interaction, suggesting a hybrid approach for a better experience.

هل تعتقد أن التحدث مع AI يقلل القلق مقارنة بالتحدث مع شخص؟

50 ردًا

Anxiety levels: 80% agree that taking to AI reduces the anxiety of practicing a new language. This highlights the advantage of AI in providing a safe space for learning to practice speaking.

هل تفضّل واجهة تعتمد على التمرير (scroll) ومهام قصيرة مثل التطبيقات الاجتماعية؟

51 ردًا

UI design preferences: 94% of users prefer a scrolling interface with short tasks similar to social media to help with their short attention span.

ما مدى اهتمامك بتطبيق يعتمد على محادثات قصيرة مع AI لتعلم اللغة؟

51 ردًا

Product interest: 88.2% of the sample expressed high interest in an app based on short lessons and AI conversations. This confirms a high market demand for this type of application.

Chapter 3

1. Logo

The logo represents the concept of English learning through a simple visual design. It features a friendly mascot which is inspired by the letter “E” from the word English, displayed in blue and surrounded by the name of the app “Fluently” which emphasize the focus on improving speaking skills. The mascot has a cheerful design with a smiling face and sparkling eyes, which represents curiosity and positivity in the learning experience.

The use of the color blue reflects serenity, calmness and peace, which are essential qualities in the educational environment. Overall, the logo balances between professionalism and approachability, emphasizing that the application aims to provide an engaging, fun and interactive environment for learning English.

3. Design Description and Tasks

3.1 Top Tasks

- 1-Browse short lessons and choose a learning activity.
- 2-Practice speaking with the intelligent chat system.
- 3-Book a live chat session with a human tutor.
- 4-Track your learning progress via the dashboard.
- 5-Receive feedback after completing activities or chat sessions.

3.2 Design Narrative:

Many participants expressed feeling that current English learning apps seem childish, overwhelming, or overly reliant on lengthy lessons requiring constant focus. Users also focused on the importance of flexibility, shorter learning sessions, and a modern, user-friendly interface that suits their age and learning style.

To meet these needs, we designed a simple and user-friendly interface for adults, avoiding bright and playful colors and opting instead for a calming and relaxing blue, along with simple icons and clear spaces. The sign-up screen reflects this approach with its sleek design and familiar login options like Google and Apple, making it easy for new users to navigate. Also we added bottom navigation bar that provides quick access to the core sections of the application, Home, Explore, Tutors, and Profile. This layout follows familiar patterns used in modern mobile apps, let the users to move between features without losing their place in the learning flow.

However, for users aged 12 and under, the system automatically provides a user-friendly interface button for children with a purple color scheme we chose purple because it's a combination of blue and red, which helps children focus along with simple icons that simplify navigation. This ensures the app is easy to use and appealing to young learners without negatively impacting the experience for older users.

The Explore section is designed around short, scrolling interactions, where each of the reading, vocabulary, and speaking skills is presented clearly and concisely to support users with short attention spans and to match their preferences for quick, achievable tasks.

The home section is designed as a clear starting point, where learners can immediately access their skills reading, vocabulary, and speaking by clicking at it. Each skill is presented as a structured card detailing progress, making it easy for users to understand their current level and choose what they want to work on next.

Users can view their progress markers at profile section, allowing learners to understand their current level and what they can do next.

We've also added speaking practice, as many users prefer AI-powered conversations. "Practice Conversation" is provided to encourage regular speaking habits. In addition to AI practice, the system also offers the option to book live speaking sessions with a real tutor, giving learners access to human guidance and correction when needed. This ensures flexibility, supports different learning preferences, and addresses issues identified by users in the existing applications.

When the learner finishes the session with the human guidance, a feedback interface appears to gather their opinion about the session so that we can improve their experience.

The overall design aims to reduce mental effort, increase motivation, support different age groups, and create a learning experience. Each screen supports the goals of ease of use, clarity, flexibility, and comfortable learning by addressing previously identified issues.

Prototype:

- The welcome screen contains the application logo; you must tap the screen to skip it.

- The user login screen is selected with Tutor or a learner, then they enter their email and password. If they do not have a previous account, they click on sign up, then enter their

name, email password and select the level.

- After logging in, the learner's Home Screen appears. At the bottom, there is a navigation bar that allows you to access the Home page, Explore, Tutors and Profile. The Homepage displays the learner's photo, and current level also allows them to browse the skills they wish to learn.

- When you click on the reading skill box, a screen will appear displaying an excerpt from a novel to improve the user's reading.

- In the vocabulary box, questions are asked about vocabulary and at the end it shows the quiz summary to see total questions, correct and wrong answers.

- If you click on the speaking box, a category selection page will appear giving the user the freedom to pick. If you pick one of them an AI chat bot page will come up where it will listen and have a conversation with you.

- At the Explore screen, you can watch and scroll some useful short videos instead of scrolling on social media.

- When you press the “Tutor” button, the Tutor screen will appear, displaying a variety of teachers sorted by how many lessons they have taught, their experience and rating. If the teacher is unavailable you can book a session and the appointment confirmation will appear, and if you find an active teacher, you can chat with them and start the session.

- When the call session is done, a feedback screen appears so we can upgrade our application.

- The profile displays the learner's name and activity, along with the number of completed sessions and the words learned, with the ability to track achievements. while keeping up with a streak. By clicking on Settings, you can edit your profile, change the font size, and log out.

- When you click on the Edit Profile button, you can edit your name, language level, and email address, and then the changes will be saved.

- When you click on the Kids Mode button on, the interface changes to a childlike style with colors tending towards purple.

Upon logging in, when the user selects the "Tutor" option, the Homepage screen appears, displaying their profile picture, upcoming sessions, and the requested books from learners, which they can accept or decline. A schedule button appears in the bottom menu, showing the dates of the learners booked sessions. There is also an account button where account information is displayed and can be edited.

Prototype URL:

- <https://www.figma.com/proto/cChqtQZ9jIOsxqv0wibqtl/HCI?node-id=252-381&p=f&viewport=204%2C479%2C0.14&t=eWvjZQVYYTivzS3J-1&scaling=scale-down&content-scaling=fixed&starting-point-node-id=6%3A34&show-prototype-sidebar=1&page-id=0%3A1>

4. UI/UX Design Evaluation:

8.2 / 10 Overall UX Score Strong result	10 / 10 Heuristics Passed out of 10	0 Major Issues Only minor preferences remain
--	--	---

Heuristic	My Evaluation	AI Tool Evaluation
Visibility of system status	Progress bars and quiz feedback are clear and instant	Progress bars, status dots, and call timer all keep users informed
Match with real world	Labels are simple and familiar	Calendar and tutor dashboard follow familiar real-world patterns
User control & freedom	Back button is always visible, logout asks for confirmation	No dead ends in any flow, cancel options prevent accidental actions
Consistency & standards	Same button style, colors, and navigation bar across all screens	Success states and primary actions follow the same visual pattern throughout
Error prevention	Password toggle and color-coded accept/reject buttons help avoid mistakes	Confirmation dialogs and clear button distinction prevent common mistakes
Recognition over recall	Skill cards show progress so users know where they left off	Tutor cards and Continue Learning card surface all needed info upfront
Flexibility & efficiency	Voice and text input both available, Google/Apple login is faster	Font size slider and learner search support different user needs
Aesthetic & minimalist	Clean screens, one task at a time, good use of whitespace	No unnecessary content competing for attention, clear card separation
Help & documentation	Feedback screen and appointment confirmation wrap up each session clearly	Contextual hints guide users without overwhelming them

Summary and Conclusion:

Comparing both evaluations gave a clearer understanding of the design. My evaluation focused more on visual aspects like consistency, spacing, and layout, while the heuristic evaluation looked at how well the interface supports the user during interaction. Most of the results were similar, which shows that the design is both visually consistent and usable.

However, the heuristic evaluation also pointed out some details that my evaluation did not, such as how there are no dead ends in navigation and how contextual hints help guide users. These observations added more depth to the evaluation.

Overall, using both methods together shows that Fluently performs well in both design and usability. The app is clean and consistent, and it helps users through clear feedback, familiar patterns, and simple navigation. This comparison also shows that visual design and usability are not always the same, and both should be evaluated.

Chapter 4

1. Usability testing:

Task Name	Task Time	Number of Errors	Comments	Suggestions to improve Task Design
Choose a role	2 seconds	1	The user found the button a bit small but, yet still knew what to do	Size up the button and choose a slightly different color contrast
New account registration (sign up)	13 seconds	0	The user didn't find any problem	none
Log into app	5 seconds	0	the user logged in smoothly	none
Explore homepage	4 seconds	0	interface was clear to them	none
Start & finish a reading lesson	19 seconds	0	The user was able to read the novel and move on to the other clearly	none
Start & finish a vocabulary lesson	14 seconds	0	The user did the task flawlessly	none
Start & finish a speaking lesson	8 seconds	0	The user found no problem	none
Scroll through explore	8 seconds	0	The user enjoyed it and did it smoothly	none
Explore tutors	8 seconds	0	The user was able to browse and find a tutor	none
Book an appointment with tutor	16 seconds	0	They understood that the tutor is not active and chatted with them to book the appointment	none
Start a session with tutor	11 seconds	0	The user easily talked with the tutor	none
Explore profile	7 seconds	0	The user did it easily	none

Edit profile	8 seconds	1	They found the setting icon was a bit small	Size up the icon
Enable kids' mode	3 seconds	0	They faced no problem	none
Log out	4 seconds	0	The user understood and did the task	none

Task Name	Task Time	Number of Errors	Comments	Suggestions to improve Task Design
Choose a role	2 seconds	0	It was clear to the user	None
New account registration (sign up)	9 seconds	0	The process was straightforward to navigate to the user	None
Log into app	2 seconds	0	They faced no problem	None
Explore homepage	6 seconds	0	Everything was clear	None
Start & finish a reading lesson	13 seconds	1	The user found Finishing the lesson is not clear	Add an interface showing that the lesson ended
Start & finish a vocabulary lesson	15 seconds	0	The user understood and did the task	None
Start & finish a speaking lesson	6 seconds	0	The process was smoothly done	None
Scroll through explore	3 seconds	0	The user enjoyed the scrolling feature	None
Explore tutors	6 seconds	0	Done without problems	None
Book an appointment with tutor	4 seconds	0	The user found all the information's that he needed	None
Start a session with tutor	3 seconds	0	The task was done smoothly	None

Explore profile	3 seconds	0	The user did it easily	None
Edit profile	5 seconds	0	The user did the task flawlessly	None
Enable kids' mode	2 seconds	0	Done easily by the user	None
Log out	2 seconds	0	The user found the task clear	None

Task Name	Task Time	Number of Errors	Comments	Suggestions to improve Task Design
Choose a role	2 seconds	0	Done easily by the user	None
New account registration (sign up)	5 seconds	0	It was straightforward process	None
Log into app	3 seconds	0	They faced no problem	None
Explore homepage	5 seconds	0	The user liked the icons	None
Start & finish a reading lesson	5 seconds	0	The user completed the task but had some questions about the mic button	The user found that it's not clear that the user should read loudly
Start & finish a vocabulary lesson	6 seconds	0	The user found the quiz summary helpful	None
Start & finish a speaking lesson	7 seconds	0	The user found the interface clear	None
Scroll through explore	4 seconds	0	The user loved the scrolling feature	None
Explore tutors	3 seconds	0	Flawlessly done	None
Book an appointment with tutor	4 seconds	0	The user completed the task without	None

			problems	
Start a session with tutor	3 seconds	0	The user appreciated that she could give feedback after the session	None
Explore profile	5 seconds	0	The user loved that she could continue her progress from the profile interface	None
Edit profile	3 seconds	0	Done smoothly	None
Enable kids' mode	1 seconds	0	The user faced no problems	None
Log out	2 seconds	0	Done easily	None

Task Name	Task Time	Number of Errors	Comments	Suggestions to improve Task Design
Choose a role	10 seconds	0	Choosing a role was clear	None
New account registration (sign up)	30 seconds	0	none	Add a password rule
Log into app	15 seconds	0	Logging in was easy	none
Explore homepage	25 seconds	0	Homepage layout was simple	Add a quick guide for sections
Start & finish a reading lesson	1 minute	0	Reading lesson was clear	none
Start & finish a vocabulary lesson	1 min 10 seconds	0	Vocabulary lesson was easy to complete	none
Start & finish a speaking lesson	1 minute 2 min	0	Each button was clearly visible. The lesson was clear	None
Scroll through	25 seconds	0	Scrolling was	None

explore	1 min		smooth	
Explore tutors	1 minute 10 seconds	1	List was useful, but filtering options were missing	Add filter by subject and rating
Book an appointment with tutor	1 minute	1	Many options are missing	Adding the ability for the user to cancel the meeting appointment and schedule another one.
Start a session with tutor	30 seconds	0	Starting a session was simple	None
Explore profile	7 seconds	0	Easy to access profile page	None
Edit profile	24 seconds	0	Editing was easy and straightforward	None
Enable kids' mode	6 seconds	0	Easy to enable the mode	Add short description about the mode
Log out	7 seconds	0	Log out option was easy to find	none

Task Name	Task Time	Number of Errors	Comments	Suggestions to improve Task Design
Choose a role	3 seconds	0	The user selected	None

			the role easily	
New account registration (sign up)	9 sec	0	The process was simple and clear	None
Log into app	4 seconds	0	Login was smooth	None
Explore homepage	5 seconds	0	The interface was clear and easy to navigate	None
Start & finish a reading lesson	14 seconds	1	The user completed the lesson but was unsure when it ended	Add a clear message indicating lesson completion
Start & finish a vocabulary lesson	11 seconds	0	The task was completed easily	None
Start & finish a speaking lesson	8 seconds	0	The task was done smoothly	None

Explore tutors	6 seconds	0	The user browsed tutors without issues	None
Book an appointment with tutor	12 seconds	0	Booking was straightforward	None
Start a session with tutor	9 seconds	0	Starting the session was easy	None
Explore profile	7 seconds	1	The user took a moment to locate the profile icon but completed the task successfully	Slightly increase visibility or size of profile icon
Edit profile	6 seconds	0	Editing was done smoothly	None
Enable kids' mode	3 seconds	0	The feature was easy to enable	None
Log out	3 seconds	0	Logout was clear and easy	None

2. Feedback Analysis:

After applying the usability test on our system, the results indicate that our participants were able to navigate the interface and interact with it smoothly. They also completed the tasks successfully with minimal issues and a short completion time. This shows that our system is highly usable and user friendly.

The few errors detected were minor and mainly relate to interface clarity and visual improvements; however, they did not prevent users from completing the task.

Since more than 70% of the tasks were completed successfully, the system meets the acceptable usability level. Therefore, it is considered easy to use, with minor improvements recommended to further enhance usability.

3. Work Distribution:

Task	Distribution	Distribution	Distribution	Distribution
Usability testing	Lama Alzubaidi	Lama Almutairi	Deena Aljeraiwi	Norah Almurabidh
